The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Chiapuzzi et al teach an assembly to simulate a torque tester unit that provides a friction-braking unit (14; especially elements 17,18), and spring 21. However, the assembly does not employ a screw, nut and locking element as called for in Applicant's claim 1.

Sonderegger teaches (Figure 2) a coiled element 36 with catch 40 in a torque-analyzing unit, somewhat resembling Applicants brake spring 66 and bent portion 67 in Applicant's Figure 3.

As to claim 1, note was made of the combination of the "screw engaging the nut and having a nut runner engaging head" (lines 4-5) and "lock element secured to the screw" (line 5 from last) with remaining limitations of the claim. In addition, note was made of the benefit cited on p. 1, second to last paragraph, where random final positioning will permit for a more accurate tester.
